

SUSTAINABILITY

POLICY

This Sustainability Policy reflects the objectives and pillars of our Sustainability Strategy as well as the goals we plan to achieve between now and 2030.

At SAAM, we believe it is only possible to project a profitable, successful company if the most stringent standards on environmental, corporate governance and social issues are a permanent part of its management.

Thus, SAAM establishes concrete mechanisms to manage its impacts in a timely manner and maximize the benefits for its main stakeholders.

SAAM has established four pillars of action behind its Sustainability Strategy

Our Sustainability Strategy has been developed in accordance with leading international benchmarks. Accordingly, we have subscribed to 6 of the 17 UN Sustainable Development Goals, amplifying its positive impact:

Gender equality

Climate action

Decent work and economic growth

Life below water

Industry, innovation and infrastructure

Partnerships for the goals

The executive management team of SAAM and representatives of all its subsidiaries are committed to assigning the necessary resources for proper implementation and compliance with these principles.

Macario Valdés Raczynski
Chief Executive Officer
